

## Mini Project 3 – Backend Database + CRUD

### 4.1.1 Logical and Physical DB Model

#### 4.1.2 Backend

The backend was tested through Thunder Client by validating CRUD operations across core MongoDB collections including users, spaces, reviews, posts, comments, likes, and favourites. Standard RESTful methods such as POST, GET, PUT, and DELETE were used to confirm that records could be created, retrieved, updated, and removed correctly depending on the resource. Some features such as likes and favourites followed a CRD pattern instead of full CRUD because they represent user interactions rather than standalone editable records.

| Endpoints      | Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

POST /api/likes/create

The screenshot shows a REST client interface with the following details:

- Method:** POST
- URL:** http://localhost:8080/api/likes/create
- Status:** 200 OK
- Size:** 176 Bytes
- Time:** 11 ms
- Body:** JSON Content  

```
1 {
2   "user_id": "69c266f9625db9017f9687d1",
3   "post_id": "69c53182b2001d712c36cf4e"
4 }
```
- Response:**

```
1 {
2   "result": 200,
3   "message": "Like created successfully",
4   "data": {
5     "user_id": "69c266f9625db9017f9687d1",
6     "post_id": "69c53182b2001d712c36cf4e",
